

Eduroam Instructions using Mac OS:

Table of Contents

- Requirements
- Setting up the Wi-Fi connection "eduroam"
- Tutorial: Setting up a Wi-Fi connection "eduroam" using Mac

These instructions describe how to set up the University of Kassel Wi-Fi using Mac OS X. With Mac OS X you use the new Campus Wi-Fi "eduroam". The advantage of "eduroam" is that the VPN-Client is no longer necessary for the manual registration.

Requirements

- Valid UniAccount of the University of Kassel
- Mac with Wi-Fi support

Setting up the Wi-Fi connection "eduroam"

To create the connection with "eduroam" you should be within the range of one of the many Wi-Fi areas of the University of Kassel. Click on the Wi-Fi symbol in the menu list and select "eduroam".

Now enter the user name and password of your UniAccount into the registration screen. Then confirm by clicking on *Verbinden/Connect*.

Next confirm the certificate by clicking on *Fortfahren/Continue*.

In the final step enter the system password of your Mac to confirm the change of system settings for the certification. Your Mac is now successfully set up for the Wi-Fi operation of the University of Kassel.
